Company Name	Test Details	Interview Details	Questions Asked
American Express	1. Aptitude Test with a small theoretical coding section (Python + SQL) 2. There was an aptitude test which had basic python related questions and logic based questions. There were 60 questions to be done in 60 minutes. Speed mattered a lot. Once, you went to the next question, the previous one could not be accessed. 3. American Express had one aptitude test.	1. 2 Interviews — Technical (Resume-based technical + puzzles) and HR. HR also included resume-based questions and a guesstimate. Round 2 is dynamic. 2. There were two rounds of interviews. Both were a mix of HR and Technical (based on your resume) questions. Each of the interview lasted for about 20-25 minutes 3. There are usually 2 interviews where one of them is a case/puzzles round, the other one is more technical where they go in depth about your projects	- Explain a data science project from resume - GFG puzzles - Features used to predict winner in a tennis match - How much cash would be needed in one IITB ATM to serve full campus
Hushh.AI	NA	The technical interview primarily focused on Machine Learning, especially the Transformer architecture. They emphasized both the theoretical aspects and the practical applications of ML models that I was familiar with. In the HR round, they ask about your understanding of the company and why I was interested in working there. They were keen to know how you could contribute to the startup and what unique ideas or value you could bring to the table.	I was asked to explain how the Transformer architecture works, breaking it down layer by layer in detail. They also questioned me about different types of optimizers, models like RCNN, and the ML models I had personally deployed.
Eka Care	NA	Two interview rounds, one HR, one Technical	How did you build your project, why did you choose the methods you did, what were your conclusions if your model failed, why did you decide to build this project only, what keeps you going or what is your motivation exactly.

Any projects that you did and want to mention in which you delved into data processing. Apart from what's written in your resume, what can you talk about my experience in data science or AI/ML.

Consult

Company Name	Test Details	Interview Details	Questions Asked
Boston Consulting Group	NA	1. 2 rounds. One manager round focused on cases based on resume. Next round by Partner. Several online & offline buddy rounds before the interview day. 2. Consult Interviews (BCG, Bain, McKinsey, LEK, Strategy&) focused on case solving mostly in all the rounds. Very few rounds are based on HR discussions. 3. 2-4 rounds of case interviews	One was a case based on EU CBAM (a project which I worked on in my internship). One was an operation efficiency improvement case for a Q-com. There was also a losses faced by a biscuit manufacturer case in Bain first round. Round1- Profitability of an automobile player in India is falling Round2 - Help improve public sector education in Rajasthan HR - Give a walkover of your resume Why BCG?
Strategy&	NA	1. Interviews- 3 rounds, 1 case study, 1 financial knowledge/understanding, 1 HR 2. 3 rounds of interviews, each one had a case	NA
McKinsey & Company	NA	2 interviews each consisting of case interview and hr round	NA
L.E.K. Consulting	NA 3 Bain: Aptitude test (probably non-evaluative) McK: Aptitude test (probably non-evaluative)	1. There were 2 Buddy rounds and 1 Senior buddy round followed by 1 manager round and the final partner round 2. 5 interviews, 3 with Bain and 2 with LEK all case based and some personal questions 3. 3 rounds of case interviews: HR + case	1. Cases of all kinds, guesstimate, profitability, market entry, and unconventional 2. They were mainly cases and resume based questions
Accenture	Aptitude, 1 test	2 rounds of interview: 1 technical, 1HR	Round 1 Accenture S&C - General Intro, motivation, 2 cases, why consult, why accenture Round 2 Accenture S&C - General Intro, resume walkthrough, 1 consult case, 3 cases from the resume itself, past intern experiences, some in general questions to check whether

			you are fit for the role and company or not.
Nomura Research Institute	NA	For consulting, we had 2 rounds of interviews. First round was a technical interview focussing on cases and resume. Second one was HR	Go to Market Strategy case Resume based questions

Core

Company Name	Test Details	Interview Details	Questions Asked
University of Luxembourg	Wrote 40 mails and got 3 offers from University of Konstanz, NUS, University of Luxembourg	NA	NA
Solar Square Energy	Coding: Basics of Data Analysis	1st Interview: It was just a normal introduction type interview to test the interest in the role offered, and also a test for the type of role that you would be taken into if you were offered the internship 2nd Interview: It was a technical one, it was to test some basic knowledge on the projects, and also some basics on data analysis	Basic core questions on the projects that you have done
Bajaj Auto	1. One test - 2 rounds. 1st round- Mechanical engineering related, more oriented towards structural materials. 2nd round- given by those who qualify 1st round (result pops on screen as soon as you complete 1st round). 2nd round is routine psychometric test. 2. Test was based on mechanical core courses throughout the 2nd year There was a first part of the test - technical part If you cleared it, you could give the second part - HR	2 interviews in total. 1st- Technical Interview (typically 15 minutes long, questions related to work mentioned in resume were asked). 2nd- HR round	In technical, questions were asked based on previous internship and some core mechanical topics like controls and manufacturing HR round was simple, just basic knowledge about the company should suffice
Fourth Partner Energy	NA	Interview 1: Technical questions were asked based on the project that we had done during the competition Interview 2: It was to know your interests and find a particular role for you in the firm	NA
Texas Instruments	1 Technical Test, focus on core concepts and basics	1 Technical Interview, focus on core concepts and technical questions (+ little HR)	Questions based on Operational Amplifiers and Diodes, and the

			calculations based on them were asked in the interview
IHI Corporation	NA	1 Interview - 50% Technical questions + Project discussion and 50% HR	NA
Siemens	One aptitude test	One Technical Interview, One HR	Technical Interview: How to run two motors at different rpms with a single actuation? HR Round: 2 strengths/weaknesses, Where do you see yourself in 5 years? Preparing your resume thoroughly would help the most. Be clear with the fundamental concepts involved in your projects.
Airbound	NA	One interview, they check by knowledge in control systems	They give me a situation related to inverted pendulum, and I had to think on that spot and explain my approach
Jaguar Land Rover	1 - with questions from Core electrical	1	I can't recall any questions as such but the test was like if you answer correct, the next question will be tougher and if you answer incorrectly the next question will be a simple one. It was unique amongst all the papers I gave.
TATA Steel	Aptitude and Coding	I have given almost 7 interviews and 3 GD which included both tech and non tech companies.	NA
Google India	There was one online test with all MCQ questions about SoC, basic digital electronics, OS, etc.	There were two technical interviews which mostly focused on basic digital concepts taught in the core courses in electrical engineering. I was asked some questions about my projects mentioned in the resume.	In the first interview: 1. One fsm-related question 2. One truth table-related question 3. I had mentioned a core course project in my resume about a CPU that uses pipelining, so i was asked to give a brief overview of it and then to explain what pipelining was and its advantages.

4. There were some more basic digital electronics related questions that I can't recall at the moment, but they were some of the common template questions that you would find in any question bank.

Second interview:

In this interview I was asked about Static timing analysis, (which I wasn't really familiar with). I told them how much I knew (like the definitions of set-up and hold time) and we moved on to other topics after he asked me a couple of questions about STL. I was asked to write a code in VHDL (Verilog, at first, but I mentioned that we weren't taught verilog but VHDL) for an asynchronous reset. Some more questions from a template question bank, then the interview was done.

University of Oslo

NA

1 (focused on research interests and prior experience)

Projects done earlier?(which are relevant to the profile)
Experience in lab work?
Why do you want to do it?

Nvidia

One test, focused mainly on digital electronics, c++, and aptitude

Only one technical interview

NA

Finance

Company Name	Test Details	Interview Details	Questions Asked
Evolve India	NA	4 Rounds: 1. Sr Associate - Resume and Finance 2. Principal - Finance and Culture Fit, Aspirations 3. Partner - Finance and Culture Fit, Aspirations 4. Managing Partner - Culture Fit and Aspirations	NA
Apollo Global Management	One aptitude/finance test (15 mins)	1. Were supposed to have at least two rounds of interviews but due to lack of time, it got limited to one technical round 2. One interview, mix of HR and Resume	In interview, some basic ML was asked like what is R^2 value and another based on p-value. Mainly questions were on the finance side: - Do you know different credit ratings? How are these ratings decided? - What is beta of a stock? - Question was asked to value a bond - Some questions asked on the projects in my resume Bond pricing, and question related to alternative investments
Citi	Interview shortlist was directly based on resume	1 interview focused on Resume, easy DSA, coding basics, and puzzles	1. How to find the missing number in permutation of n numbers. 2. I have a dice, where the outcome would be my score, if I don't like my score, I can roll just one more dice and then whatever outcome I get in that, I would have to accept that score. What is my expected score? 3. OOPS concepts 4. Difference between a list and an array
Finmechanics	Finmechanics conducted 1 MCQ type test with negative marking focusing on topics mainly regarding basics of coding in javascript, some basic finance questions and mental ability and tricky maths questions(some questions were	2 rounds of interview were conducted. In first round introduction and questions related to finance were asked but some software related questions also popped up. They do not want you to know everything but expect you to	In first round, was mainly asked about option pricing model binomial model, what are options Greeks etc. Second round they asked about previous intern and also asked 1 ML (linear regression) question. One other question was given 5

integer type too). Focus that you do well in all sections because they want above average marks in all sections...

know at least the basics of things they ask...For round 2 the whole panel (almost of 11 people) take your interview. This interview basically tests your mental strength...They will ask your motivation and also give you scenarios and what would you do in that particular scenario... Very little technical questions were asked.

companies and 5 roles which would you rank first and why...

Deutsche Bank	Just 1 HR test	4 interview rounds, mix of technical (aptitude) and HR questions (was the only 1 not to be tested on coding, had specified disinterest regarding SDE); for finance, they mainly pick any related points from your resume and test your knowledge further; may also ask guesstimates	Brainstellar easy level problems
Asia Index Pvt. Ltd. - Bombay Stock Exchange	Focussed on excel, data analytics, finance concepts, basics of valuation and stock markets	1 interview only Technical+HR combined	NA
Morgan Stanley	1 - aptitude and basic finance section	2 technical- one was on probability questions, the other was on basic finance, mostly regarding bonds.	Brain Stellar chocolate question, and expectation of a dice roll. Difference in interest rates between long term and short term bonds and secured unsecured bonds and a little on current happenings
Goldman Sachs	N.A.	There were 3 rounds of interviews. First two were technical interviews and the last one was an HR interview.	In the interview I was asked some basic questions on probability and statistics, and also some DSA related questions(dp etc.) In one of the interviews I was given a probability problem which had a recursive solution and then they asked me to write pseudocode for that recursive function.
Apollo Global Management	One aptitude/finance test	One technical interview related to finance	Bond pricing, and question related to alternative investments

FMCG

Company Name	Test Details	Interview Details	Questions Asked
Procter & Gamble	Only 1 test consisting of a Personality evaluation followed by mental ability evaluation which consisted of 3 segments	There were 2 interviews, the first one was a GD but it was more like a group interview in which the same question was asked to the three people in the group. In this GD they mostly focussed on technical and leadership skills. The second interview was an HR round and it was more like a formality as people already got selected in the first round itself	All the questions are asked based on a specific interview manual which P&G has and it is easily available online on a channel called Bahroz abbas
ITC Ltd.	1 aptitude test divided into a 3-4 sections	2 Group Discussions: first one was based on general topics involving logical reasoning, second one was technical in nature 1 Interview: mostly HR focused with a couple of technical questions	Test: Quick math, puzzles, logical reasoning and comprehension of data GD 1: Your flight has crashed in between and 10 of you have coincidentally met together in a forest-y area, you have 15 objects with you. Discussing as a group, rank them from most to least useful/important in 10 minutes. GD 2: i. You have to make a waste to energy plant for municipal solid waste, create a detailed plan for it on a paper in front of you ii. Paper is taken from you and you are required to talk about your idea for 1 minute iii. Random pairs are formed and each pair has to on the spot without prior discussion, based on what both of them have individually said, integrate their idea and discuss that for 1 minute in front of everybody else in the group Interview: Standard HR questions, how would you add value to the company, what kind of area can we place you in a plant, what do you expect out if this internship, they will incorporate technical stuff from your resume into their questions

IT/Software

Company Name	Test Details	Interview Details	Questions Asked
Quadeye	NA	3-4 short interviews then HR	NA
IMC Trading	One Coding Test	One Group Discussion: Technical Focus One Technical Interview One HR Interview Round	NA
Deutsche Bank	One online assessment: 10 MCQs on databases and general coding concepts in JAVA. 2 Coding question: 1 simple and 1 hard.	1st round: Technical interview(DSA and aptitude) 2nd round: Professional fit round(questions on resume and Why Deutsche Bank type questions) 3rd round: HR round	NA
Microsoft	1 Coding Test/DSA Based	2 Interviews	
Qualcomm	As for preparing for the internship season, at least 100+ LeetCode, and almost all the mock tests given by PT Cell. Regarding Qualcomm's test, there was 1 MCQ test on general software basics (Java, C++ etc.) and some aptitude questions on the software side.	2 Technical: Very good questions on Signal Processing, Probability and Random Processes, and Optimization. HR: Nothing as such	Questions were based on Signal Processing, Probability and Random Processes, and Optimization.
Nikko Co. Ltd.	Coding	Technical interview : depth knowledge on projects you have done. And some problems related to their real life systems. How would you approach it.	NA
Qure.ai	NA	4 Interviews- 1st- Resume Round 1 2nd- Resume Round 2 3rd- Research Paper round 4th- HR Round	NA
P&G (through Spotlight)	1 aptitude test	Group challenge: gave a technical problem faced by the company on which we had to Ideate a solution Personal interviews: 1 was HR (situational), 1 was behavioral (I	1. Give a way in which we can find out how p&g's products are being displayed in stores (visibility, quantity etc)

		brought in tech in the answers). Other people had proper technical interviews based on their resumes	2. If you are already working on a project which is to be completed in 3 weeks and your superior gives you a completely new project due in 2 weeks what will you do 3. Give an example of time in your life when you had to stand up to a higher authority and how did you do it 4. Give an example of a time when you had to make an unconventional decision
AWL, Japan (Remote)	1 written test was taken. The test had 2 sections. First had MCQs regarding ML/DL. Second section had 5 coding questions, basic to moderate DSA.	One interview. Completely based on resume. They can make out really quickly if you are thorough with your projects or not. So have clear understanding of whatever you have done.	In MCQs there were questions on Transformer architecture and in DSA section a question was based on string (it was very easy).
Fractal.ai	For fractal there was only 1 test which had 4-5 DSA questions and people who solved 3 or more questions (all test cases) got shortlisted for the interview	There were 2 interview rounds : 1st one was technical, around 45 min which focused on some dsa ques (linked lists, trees) and deep learning concepts with questions on ResNet, CNNs, Basics of Neural networks, activation functions etc.	NA
Siemens	1	2	NA
Rubrik	1 Coding test (4 CP questions to code on hackerrank)	2 Technical (pen paper DSA round), 1 HR (resume discussion), no GD	NA
Goldman Sachs	1. 1 Online Test having aptitude, core cs and coding 2. Goldman Sachs had 1 coding test of 2 hours, 1 hour for Quant profile and 1 for Software	1. 3 technical interviews (The last one being technical cum hr) 2. 3 rounds of interview. Mostly DSA and OOP concepts. 3rd round had HR questions as well.	NA
Citi	NA	NA	NA
Pattern Technologies	The paper consists of 3 parts 1. 4 DSA questions (2 easy, 2 medium) 2. Aptitude questions (easy) 3. 2 SQL questions	There were 2 rounds of interviews : 1. Technical interview (typical software interview) 2. HR round	NA

Willings - Tonichi Insatsu Co Ltd	NA	NA	NA
Tech Mahindra	1 coding, 2 aptitude (mainly on english, listening communication skills)	2	NA

Quant

Company Name	Test Details	Interview Details	Questions Asked
Citadel	Only a single CP test was conducted.	3 interviews, out of which 2 were technical, and the last one was HR (although the technical interviews also involved questions on my previous internship experience).	NA
Optiver	a single test, focussing on Mental Math, Aptitude and Probability with some HR-based questions	1 round of GD followed by 3 rounds of interviews- two of them being entirely technical and one being HR, the GD was also technical	Mostly questions based on probability from the Green Book (or similar), together with a lot of mental math, were asked in the tests. The GD was on the market making mainly with an emphasis on applications of probability. The interview included playing a simulation-based game on their website, including market-making concepts, betting, options trading and other probability concepts and the HR was just getting to know me as a person and if I would fit well in the team.
Graviton	1	3	NA
Qube Research & Technology (QRT)	1. There was one OA round common for both the roles (developer and researcher). It consisted of 2 coding (DSA) ques and several puzzles based questions on probability, statistics and aptitude. 2. Single test based on probability, statistics, aptitude and two DSA questions	1. There were 2 rounds of interviews both of them were mostly technical and few questions were based on the projects/internship mentioned in the resume. 2. Two interviews - One technical and one HR	In the interview there were few questions on cs fundamentals and a coding question in which you had to discuss your approach and dry run on some cases to show it indeed was working correctly.
Goldman Sachs	1. 1 test was for CS section and 1 test for Quant section. 2. 1 test testing probability, maths, puzzles and coding skills	1. 2 Interviews, both technical 2. 3 technical interview rounds	Round 1: ML questions based on ML research project in resume, then basic ML concepts. Brainstellar questions like e^{π} is bigger or π^e and SVD in linear algebra.

Round 2:

<https://brainstellar.com/puzzles/probability/114> and 3 3-chances version of it. DSA question about the least number of coins used such that they add up to a given value and the coins are of a given denomination. Questions on option greeks, binomial method and Black Scholes as it was mentioned in my resume.

Citi Bank	No test	technical interview on probability and python and OOPs	NA
IMC Trading	1 test. Mostly focused on DSA, coding. Topics like Priority queue, DP are most important.	1 Group discussion (about 1.5 hours), 1 technical interview (2 hours), 1 HR interview (20 mins). GD was focused on solving DSA problem by discussing with teammates, interviewers, etc. Technical interview had 2 parts : first brainstorming with the interviewer for the most efficient solution and then actually coding one of the solutions in their codebase. We were supposed to complete 2 functions in their codebase which was kinda huge.	interview : order matching based on price-time priority GD : something related to tasks completion using different servers
Graviton Research Capital	None	None	None
Goldman sachs	Probability plus dsa for quant only dsa for software	3 all tech plus hr	NA
Goldman Sachs	One assessment test for quant role. - both coding and probability related questions - basic CP like DP, trees, graphs, sliding window were asked for coding related questions afaiik	2 rounds Round 1 : Probability based (Math) Round 2 : CP based (Tech) + Resume based questions in both rounds	NA
Optiver	One test with a bunch of subtests and games which basically test aptitude, quick thinking, basic math and probability, identifying	One Group Discussion - Market Making Interview - One HR and one trading interview.	Test - As I mentioned, a bunch of subgames (openquant.co has a few of them), 80 in 8, complete the sequence, some probability questions and a personality quiz.

sequences and also a tiny
personality quiz

GD - GD was focused on market making, where you provide a bid and an offer for some random thing that they will ask, and everyone has to trade on it. You have to keep track of your position, and PnL throughout (This will be explained in a document that they will share prior to the GD, if you have qualified). Questions -
Make a market on population density of mumbai. Make a market on the number of chess positions after 3 moves by each player. Make a market on the sum of (some xyz) numbers (you had to approximate and give a market). One probability question about martingale also was asked.
Interview - HR interview was pretty straightforward. We had a conversation about things I mentioned in my resume about my intern and extracurriculars, things I do apart from studies, and in general college life. They asked me more questions about my character during the conversation. The trading interview was sort of a sports betting game with probabilities attached to each team and you had to give your thought process and reasoning as to why you are betting for or against a particular team. You need to be quick at math, EV calculation and just some logical thinking. There is no fixed answer, your calculation and intuition matters more.

Company Name	Test Details	Interview Details	Questions Asked
American Express	1 - Aptitude test. It was very similar to the one that was conducted by the ICs. Generally, it was recommended by seniors to also learn sql before the test for American Express, but we weren't asked in the test.	There were 2 rounds, conducted back to back for all candidates. First round was focused on the resume. You should thoroughly know your projects, everything from your resume. Second round had both hr questions and some aptitude questions. Going through brainstellar would help for this part. One should prepare for the standard hr questions and make sure the answers align with the core values of the company. Going through the website of the company before the interview helps.	HR: 1) Where do you see yourself in 5 years? 2) Why American Express?
